Education

COMSATS University Islamabad

Lahore, Pakistan

Bachelors of Science in Computer Science .

Jan 2022

Courses: Web Development, Mobile App development, Machine Learning, Data Science, Database, Data Structures.

Work Experience

Aleh Tech FZCO

Dubai, UAE (remote)

Software Engineer

June 2023 - Dec 2024

- Developed a versatile web application for deploying ERC20 tokens across multiple blockchain networks with customised settings and launch presets.
- Built a token-based web application enabling interactions with meme coins, incorporating staking and bridging modules to enhance token utility.
- Designed and deployed custom Web3 solutions, optimising smart contract interactions and decentralised application functionalities.
- Enabled seamless blockchain connectivity and DeFi integrations, improving transaction efficiency and cross-chain interoperability.
- Developed a cryptocurrency accounting and tax management platform with automated transaction labelling and real-time visualisation, enhancing financial tracking efficiency, and secured **\$200,000** in seed funding to expand platform capabilities and drive market growth.

Stackup Solutions

Lahore, Pakistan

Software Engineer

April 2021 - June 2023

- Designed and developed scalable SaaS applications with maps, online tracking, payments, real-time chat, and multi-language support, expanding global accessibility.
- Optimised workflows with reusable components, improving efficiency and user experience.
- Integrated third-party services for seamless location tracking, notifications, and secure transactions, enhancing reliability.
- Deployed localised applications across multiple platforms, increasing market reach.
- Developed a digital platform for a construction solutions company, streamlining operations and boosting revenue by **30%**.

Hybrid Squares

Lahore, Pakistan

Associate Software Engineer.

Aug 2020 - April 2021

- Developed a digital platform for a wholesale market startup, enabling over **100** vendors to register and sell products online.
- Transformed traditional marketplace processes, improving vendor-buyer interactions and scalability, supporting more than **1,000** transactions weekly.
- Focused on enhancing operational efficiency, resulting in a **25%** increase in platform usage over six months.

Projects

Keeper Labs | *Next.js, Wagmi, Ethers, Viem, RainbowKit, Vezgo, Zerion, Coinstats, Google API*

- Developed a financial tracking platform enabling users to sync wallets/exchanges with Zerion and CoinStats for real-time portfolio management.
- Implemented transaction relabelling and automated tax report generation.
- Integrated smart contract interactions using blockchain protocols for swapping (KyberSwap) and bridging (Synapse Protocol).
- Built frontend using Next.js with a seamless user experience for managing digital assets and DeFi transactions.

BlobDAO | *Next.js, Wagmi, Viem, Recharts, Wallet Connect*

- Developed BlobDAO, a decentralised platform that lets users contribute meme coins for rewards and help fund sustainable growth.
- Used Next.js for the frontend, with Wagmi, Ethers, and Viem to connect to smart contracts.
- Integrated Recharts to display data and track performance.
- Enabled users to stake meme coins or swap them for BLOB tokens, with rewards based on how long they participate.

Blockrock | *Next.js, Wagmi, Viem, Redux Toolkit, RainbowKit*

- Developed a decentralised token deployment platform supporting multi-chain functionality with ERC20 monitoring.
- Implemented administrative tools to oversee token deployments and manage token portfolios in real-time.

Gotlr | *React Native, Socket.io, Google Maps, One Signal, Mango Pay, Social Logins, i18n*

- Developed a SaaS delivery platform in React Native that allows users to select nearby stores and riders for quick deliveries.
- Users can view featured stores and available riders on a map, make purchases from the store, and complete transactions using MangoPay's in-app payment system.
- Enabled live tracking of the rider's location and in-app chat using Socket.io for communication between users and riders.
- Included a "Rider Mode" for delivery personnel to manage orders and view delivery locations.

Mutlipass | *React Native, Stripe SDK, In App Purchases, Apple and Google Pay*

- Developed a modern ticketing system in React Native for seamless event and transit access.
- Integrated Stripe M2 reader with Stripe Terminal along with Apple and Google pay for secure payments.
- Implemented QR and NFC scanning for smart card validation.

Technical Skills

Programming languages: Javascript, Typescript, Python, Java and C.

Web & Mobile development: React.js, Next.js, React Native (CLI & Expo).

Blockchain/Web3: Wagmi, Ethers, Viem, RainbowKit, Web3

State management: Redux (RTKQuery, thunk, saga), Context API.

E-commerce and Payment: Shopify API, Woocommerce API, Stripe, In App Purchases.

Tools/Platforms: Git, JIRA, Trello, Notion, EC2, Amplify.

Deployment: Google Play, Apple App Store, Heroku, AWS.
