Education

Mercy University, New York, NY

M.S. In Computer Science | *December 2026*

Relevant Courses: Big Data, Machine Learning, NLP, DevOps and MLOps, Computer Vision, Cloud Services

COMSATS University Islamabad, Lahore, Pakistan

B.S. In Computer Science | *December 2021*

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python, Java, C

Frontend & Mobile: React.js, Next.js, React Native, Tailwind CSS

Backend & Databases: Node.js, FastAPI, PostgreSQL, MongoDB, Firebase, Supabase, REST APIs

AI & NLP: Transformers (Hugging Face), Semantic Search (FAISS, SBERT), BioBERT, Pandas, Jupyter

AI Dev Tools: Cursor, Claude Code, v0, Lovable, Gemini, OpenAI Codex

Blockchain/Web3: Wagmi, Viem, Ethers.js, RainbowKit

Payments & Commerce: Stripe, In-App Purchases (IAP), RevenueCat

Cloud & Tools: AWS (EC2, Amplify), GCP, Git, JIRA, App Store/Play Store Deployment, Vercel

Work Experience

Mercy University, New York, NY

Teaching Assistant, Computer Science Dept | *September 2025 - Present*

- Develop course materials and hands-on demos while evaluating student work with actionable feedback to strengthen understanding of core Computer Science concepts
- Tutor students individually and in small groups, helping them debug code, clarify complex topics, and develop stronger problem-solving skills.

Aleh Tech FZCO, Dubai, UAE

Software Engineer | *June 2023 - December 2024*

- Built a full cryptocurrency accounting and tax platform with real-time PnL and automated transaction labelling powered by AI, replacing manual workflows for investors and finance teams.
- Designed and shipped key product features including portfolio visualisation, staking and asset-transfer modules, and multi-network ERC20 deployment tools that enabled non-technical users to launch and manage tokens easily.

Stackup Solutions, Lahore, Pakistan

Software Engineer | *April 2021 - June 2023*

- Developed SaaS platforms for logistics and retail clients, including delivery tracking, contractor management, resource monitoring, maps, payments, and real-time chat, improving coordination across customers, riders, and internal teams
- Led engineering on a construction management system that automated contractor assignments, payroll, and inventory tracking, resulting in a 30% revenue increase for the client.

Projects

Medical NLP Chatbot (course project) | *Python, BioBERT, Transformers, FAISS, S-BERT, FastAPI, Pandas*

- Developed a healthcare-focused intent classification system using BioBERT to accurately categorize clinical queries and ensure context-aware response reliability.
- Engineered a Semantic Search pipeline using S-BERT and FAISS for high-speed retrieval of medical answers, served via a high-performance FastAPI backend.

Keeper Labs, BlobDAO, Blockrock | *Next.js, Wagmi, Ethers, Viem, RainbowKit, Vezgo, Zerion, Coinstats, GCP*

- Built a full-stack DeFi platform enabling users to sync wallets and exchanges (Zerion, CoinStats) for real-time portfolio tracking, automated transaction relabeling, and tax report generation.
- Integrated smart contract interactions for swapping (KyberSwap), bridging (Synapse Protocol), staking, and ERC20 token management across multiple chains.
- Architected a Next.js DeFi frontend using Wagmi/Viem for secure wallet authentication and staking flows, integrated with real-time Recharts dashboards to monitor user portfolios and token deployments.

Gotlr, Multipass, MietBox | *React Native, Stripe SDK, Socket.io, Google Maps, OneSignal, Mango Pay, Social Logins, i18n*

- Built production-grade React Native applications supporting real-time delivery workflows, location tracking, in-app chat, and interactive store/rider selection using maps and [Socket.io](#). | **Gotlr** (April 2021 - Jan 2022)
- Developed secure payment flows using MangoPay, Stripe SDK, Apple Pay, Google Pay, and In-App Purchases, including Stripe Terminal (M2 reader) for physical transactions.
- Implemented QR/NFC scanning for ticketing and smart access validation, and added push notifications, social logins, and localized UI for global users.
