Work Experience

Mercy University

New York, NY

Teaching Assistant, Computer Science Dept.

Sept 2025 - present

- Assist professors in preparing lecture materials, coding demonstrations, and lab sessions for undergraduate Computer Science courses.
- Grade assignments, projects, and exams, providing detailed feedback to help students improve their understanding of core programming concepts.
- Tutor students one-on-one and in small groups, clarifying course material and helping them troubleshoot code and debug projects.
- Support faculty in maintaining course documentation and managing classroom tools and learning platforms.

Aleh Tech FZCO

Dubai, UAE (remote)

Software Engineer

June 2023 - Dec 2024

- Built a cryptocurrency accounting and tax platform that helped investors and finance teams track wallets, calculate PnL, and generate compliant tax reports for the North American market.
- Developed AI-powered automation tools that analyzed transactions and auto-labeled them in real time, replacing manual tracking with accurate financial insights.
- Designed front-end architecture that made complex portfolio data easy to interpret, improving usability and decision-making for users
- Integrated blockchain modules for staking and asset transfers, enabling users to manage and move digital assets directly within the platform.
- Collaborated with leadership on investor demos and feature planning, helping the platform secure early seed funding and move toward public launch.
- Created a web app with preset configurations that simplified ERC20 token deployment for non-technical users across multiple networks.

Stackup Solutions

Lahore, Pakistan

Software Engineer

April 2021 - June 2023

- Developed SaaS platforms for logistics and retail clients, including delivery tracking, contractor management, and resource monitoring systems.
- Built mobile and web features with maps, payments, and in-app chat to support real-time coordination between customers, riders, and internal teams.
- Optimized platform speed and reliability, reducing delivery delays and improving task assignment efficiency for field teams.
- Led development of a construction management platform that automated contractor assignments, payroll, and inventory tracking, helping increase client revenue by **30%**.

Technical Skills

JavaScript (ES6+), TypeScript, Python, Java, C, React.js, Next.js, React Native, Tailwind CSS, Node.js, Express.js, REST APIs, GraphQL, MongoDB, PostgreSQL, Redux Toolkit, Zustand, Context API, Stripe SDK, In-App Purchases, Shopify API, WooCommerce API, AWS EC2, AWS Amplify, GitHub Actions, CI/CD, Docker, Git, JIRA, Trello, Notion, Postman, Cursor Pro, Vercel, Heroku, Google Play, Apple App Store

Projects

Keeper Labs | *Next.js, Wagmi, Ethers, Viem, RainbowKit, Vezgo, Zerion, Coinstats, Google API*

- A financial tracking platform enabling users to sync wallets/exchanges with Zerion and CoinStats for real-time portfolio management.
- Implemented transaction relabelling and automated tax report generation.
- Integrated smart contract interactions using blockchain protocols for swapping (KyberSwap) and bridging (Synapse Protocol).
- Built frontend using Next.js with a seamless user experience for managing digital assets and DeFi transactions.

BlobDAO | *Next.js, Wagmi, Viem, Recharts, Wallet Connect*

- A decentralised platform that lets users contribute meme coins for rewards and help fund sustainable growth.
- Used Next.js for the frontend, with Wagmi, Ethers, and Viem to connect to smart contracts.
- Integrated Recharts to display data and track performance.
- Enabled users to stake meme coins or swap them for BLOB tokens, with rewards based on how long they participate.

Blockrock | *Next.js, Wagmi, Viem, Redux Toolkit, RainbowKit*

- A decentralised token deployment platform supporting multi-chain functionality with ERC20 monitoring.
- Implemented administrative tools to oversee token deployments and manage token portfolios in real-time.

Gotlr | *React Native, Socket.io, Google Maps, OneSignal, Mango Pay, Social Logins, i18n*

- A SaaS delivery platform in React Native that allows users to select nearby stores and riders for quick deliveries.
- Users can view featured stores and available riders on a map, make purchases from the store, and complete transactions using MangoPay's in-app payment system.
- Enabled live tracking of the rider's location and in-app chat using Socket.io for communication between users and riders.
- Included a "Rider Mode" for delivery personnel to manage orders and view delivery locations.

Mutlipass | *React Native, Stripe SDK, In App Purchases, Apple and Google Pay*

- A modern ticketing system in React Native for seamless event and transit access.
- Integrated Stripe M2 reader with Stripe Terminal along with Apple and Google pay for secure payments.
- Implemented QR and NFC scanning for smart card validation.

Education

Mercy University

New York, NY

Masters of Science in Computer Science

Expected Graduation, Dec 2026

Courses: Big Data, Machine Learning, NLP, DevOps and MLOps, Computer Vision.

COMSATS University Islamabad

Lahore, Pakistan

Bachelors of Science in Computer Science

Jan 2022

Courses: Web Development, Mobile App development, Machine Learning, Data Science, Database, Data Structures.
